Keywords: e-learning, knowledge centers, organic farming, advisers

### Abstract

*This paper presents the results of the “Ecologica” EU project, promoted within the Leonardo da Vinci Program (HU/05/B/F/PP-170018), coordinated by Corvinus University of Budapest. The goal was the development of coordinated operation of Knowledge and Education Centers and connection to them by the Internet at the partner Institutions (Biocert-Italy, Corvinus University-Hungary, AHOF/MÖGÉRT-Hungary, University of South Bohemia-Czech Republic, University of Maribor-Slovenja, Slovak Agricultural University-Slovak Republic, Estonian University of Life Sciences-Estonia, Latvian University of Agriculture-Latvia). Another goal was the collection of a basis of ecological farming knowledge on a joint server called “Ecolibrary.” The Knowledge Centers would perform the dissemination of collected knowledge for the organic farming advisers in the frame of e-learning training courses based on the mutually developed education material that would be adapted to the given ecological, technological, social, and economic circumstances.*
