Keywords: sustainable, index, reserves, evaluation

Abstract

A methodological proposal for the modelling of an action space was constructed that measured the sustainability of the methods of environmental conservation in 26 Reserves of the Civil Society in the south of Colombia. The objective of the evaluation was to establish a tool that allowed to determine, through mathematical modeling and the weight of a hierarchic system of criteria by a panel of experts, a sustainable index that described the impact as a process of environmental management that is born with the communities farmers who in the present work for their the socioeconomic sustainability and the integrity of the ecosystems.
