Keywords: certification, critical points (CP), Greece, organic production, problems, solution

### **Abstract**

*Organic production in Greece has been greatly developed in the last few years, a development that was followed by a number of problems. In this paper, we present the Critical Points of organic certification, as well as the results of a survey conducted throughout Greece, concerning the problems that organic farmers face. Furthermore, a number of suggestions/solutions for dealing with these problems are presented.*
