

The School Garden as an Arena for Ecological Understanding and Reconnection with Nature

McKinnon, K.

Keywords: school garden, soil activities, soil education, soil management

Abstract

The Earth is facing serious trouble due to human impact, soil degradation being one of the most serious threats against the Earth's well-being. There is therefore a need for specially adapted soil education programs. School gardens can be recognized as valuable arenas for such education. Soil activities are being developed in the school garden at Bioforsk Organic Food and Farming Division in Norway.
